## PAPER LUMINAIRES

15 MINUTES  
OR LESS

### YOU'LL NEED

- ScanNCut or DesignNCut machine
- Luminaire cutting file (see below)
- Standard mat
- Standard blade
- 1 sheet scrapbooking paper 12 x 12in
- Double-sided tape

### SETTINGS

Blade depth 2.5

Cut pressure 0

These are suggested settings only.  
Always complete a test cut and adjust  
as needed before cutting design

If making multiple, save time by working with two mats. Prep the next mat while the other is being used for cutting.

### LET'S START

#### test your settings

Smooth paper onto a standard mat, right side up. Test cut and adjust settings as needed.

#### cut the file

Load the file and cut 1 of the design to make one house. Remove from mat.

#### fold and assemble

Fold along perforation lines. Apply double-sided tape to the right side of each tab. Working one tab at a time, remove backing paper from tape and press tape in place. And you're done!

#### display

To light, fill with a battery operated tea-light candle.
